ALBERT EMBANKMENT

PILE BREAKDOWN

Our works at our Albert Embankment site are progressing well. We are coming to the end of the marine works for Cofferdam 2 which we aim to complete by the end of March.

In mid-March, as part of our landside works in Cofferdam 1, we will begin to reduce the size of the bored piles around the perimeter of our shaft by 1 metre, allowing us to tie them together using a steel and concrete capping beam. In order to reduce the piles, we will be using an excavator with a hydraulic breaker attachment. We will be employing an innovative technique of pre-splitting the piles to reduce the noise from the break out as much as possible. This work is essential before we can begin excavation.

Below is a plan showing the location of the piles to be reduced. This will take approximately three weeks to complete and take place during our normal working hours Monday to Friday **08:00 to 18:00** and Saturday **08:00 to 13:00**. During the activity we will continue to monitor noise and vibrations.

KEY INFO

Key information here

Working hours:

- 08:00 – 18:00 Monday to Friday
- 08:00 – 13:00 Saturday

What to expect:

- Some noisy works during pile break down

What we will do:

- Continue to monitor noise and vibration levels
- Keep you informed of upcoming works
