<u>Chambers</u> Wharf – Community Liaison Working Group (CLWG) Glossary of key terms:

This a Glossary of some of the terms and abbreviations which may appear in the discussion, minutes and notes of the CLWG meetings.

Term / Abbreviation	Description
A weighting (A)	A frequency weighting devised to attempt to
Acoustic Enclosure:	take into account the fact that human response
	to sound is not equally sensitive to all
	frequencies
	This term describes a structure which is built around
	a specific construction activity to reduce levels of
	noise. A number of acoustic enclosures will be
	constructed on the site to reduce noise. The largest
	of the acoustic enclosures will be built over the shaft
	and another acoustic enclosure which will be built
	around elements of the slurry treatment plant.
Adits	Tunnel adits will be the first sections of tunnel which
	connect to the shaft and are the underground
	chambers from which the TBM will begin tunnelling
Annulus	A gap between the secondary lining and diaphragm
	walls
Baseline noise/vibration:	Also known as 'ambient' noise (or vibration), this is a
	measurement of the existing noise/vibration
	conditions at a particular location prior to the start
	of construction (e.g road noise). This can have a
	bearing on the noise level at which mitigation is
	offered, and is partly judged on the difference
	between the existing noise and that of the predicted
	noise from the construction activities.
Base Slab	The base slab is the reinforced concrete structure at
	the bottom of the shaft.
Bazelgette Tunnel Ltd (BTL)	This is the registered name of the company
	responsible for building the Tideway tunnel. The
	trading name of this company is 'Tideway'
Best practicable means:	The Tideway Tunnel project carries out its
	construction activities following 'best practicable
	means'. In general, it refers to a method of
	constructing the project that balances needs of the
	local community / stakeholders whilst delivering the project efficiently and providing best value to water
	bill payers. The legal definition of 'best practicable
	means' is defined in the Control of Pollution Act
	(1974).
Code of Construction Practice (CoCP)	Major projects such as the Tideway Tunnel each
	have a Code of Construction Practice , which sets
	out best practice, mitigation and other
	commitments to be applied during construction. The
	project's Code of Construction Practice contains a
	series of requirements that the project will be legally
	bound to follow during construction.
Costain Vinci Bache (CVB)	Constain Vinci Bache (CVB)This is the joint venture
	between three construction companies who are
	building the Eastern Section of the Tideway project.

Decibel (dB) The unit used to express the ratio of one value of a physical property to another on a logarithmic scale. It can be expressed as a change in value or an absolute value. The decibel scale is used to express sound meaningfully as using a linear scale would result in the use of an enormous range and scale of data. Development Consent Order (DCO) A development consent order was required in order for the project to go ahead. This was granted by the Secretary of State for the Environment, Food and Rural Affairs, and the Secretary of State for Communities and Local Government. It is the legal consent for contruction of the Tideway Tunnel Independent Advisory Service (IAS) The IAS provides advice to parties affected by Tideway's works and advises on which organisation to contact regarding complaints and compensation. Independent Compensation Panel (ICP) This in an independent panel comprising of a chairperson and number of additional members. Each member has a specialism (eg medical, noise, dust, vibration, property etc). Anyone who believes they may be affected by the Tideway works may make an application to the ICP for additional mitigation. Additional mitigation may range form items such as secondary galzing, daily respite, periods of temporary rehousing during specific construction activities or even rehousing throughout the Tideway works. One of the functions of the ICP is to supervise the implementation of various policies (eg NSOMCP – see below) and determine any dispute should one arise. Where parties are not satisfied with the response from the ICP they can take any disputes to the ICC to review the decision made The Non-statutory Off-site Mitigation and Compensation Policy (overs aspects of mitigation and compensation which area available to those living or working near Tideway construction sites. It is available on the Tideway website. This is mitigation example, by installing secondary glazing at a property affected by noise		The full names of the three companies are Costain

It is available on the Tideway website. Off-site mitigation: This is mitigation measures that the project can install at properties around the construction. This will reduce the levels noise or vibration levels where the effects are felt: for example, by installing secondary glazing at a property affected by noise	Indonondent Advicent Consists (IAC)	
Independent Compensation Panel (ICP) This in an independent panel comprising of a chairperson and number of additional members. Each member has a specialism (eg medical, noise, dust, vibration, property etc). Anyone who believes they may be affected by the Tideway works may make an application to the ICP for additional mitigation. Additional mitigation may range form items such as secondary galzing, daily respite, periods of temporary rehousing during specific construction activities or even rehousing throughout the Tideway works. One of the functions of the ICP is to supervise the implementation of various policies (eg NSOMCP – see below) and determine any dispute should one arise. Independent Complaints Commissioner (ICC) Where parties are not satisfied with the response from the ICP they can take any disputes to the ICC to review the decision made Non-statutory Off-site Mitigation and Compensation Policy (NSOMCP): Compensation Policy covers aspects of mitigation and compensation which area available to those living or working near Tideway construction sites. It is available on the Tideway website. Off-site mitigation: This is mitigation measures that the project can install at properties around the construction. This will reduce the levels noise or vibration levels where the effects are felt: for example, by installing secondary glazing at a property affected by noise	independent Advisory Service (IAS)	
Independent Compensation Panel (ICP) This in an independent panel comprising of a chairperson and number of additional members. Each member has a specialism (eg medical, noise, dust, vibration, property etc). Anyone who believes they may be affected by the Tideway works may make an application to the ICP for additional mitigation. Additional mitigation may range form items such as secondary galzing, daily respite, periods of temporary rehousing during specific construction activities or even rehousing throughout the Tideway works. One of the functions of the ICP is to supervise the implementation of various policies (eg NSOMCP – see below) and determine any dispute should one arise. Independent Complaints Commissioner (ICC) Where parties are not satisfied with the response from the ICP they can take any disputes to the ICC to review the decision made Non-statutory Off-site Mitigation and Compensation Policy (NSOMCP): The Non-statutory Off-site Mitigation and Compensation which area available to those living or working near Tideway construction sites. It is available on the Tideway website. Off-site mitigation: This is mitigation measures that the project can install at properties around the construction. This will reduce the levels noise or vibration levels where the effects are felt: for example, by installing secondary glazing at a property affected by noise		
chairperson and number of additional members. Each member has a specialism (eg medical, noise, dust, vibration, property etc). Anyone who believes they may be affected by the Tideway works may make an application to the ICP for additional mitigation. Additional mitigation may range form items such as secondary galzing, daily respite, periods of temporary rehousing during specific construction activities or even rehousing throughout the Tideway works. One of the functions of the ICP is to supervise the implementation of various policies (eg NSOMCP – see below) and determine any dispute should one arise. Independent Complaints Commissioner (ICC) Where parties are not satisfied with the response from the ICP they can take any disputes to the ICC to review the decision made Non-statutory Off-site Mitigation and Compensation Policy (NSOMCP): The Non-statutory Off-site Mitigation and compensation which area available to those living or working near Tideway construction sites. It is available on the Tideway website. Off-site mitigation: This is mitigation measures that the project can install at properties around the construction. This will reduce the levels noise or vibration levels where the effects are felt: for example, by installing secondary glazing at a property affected by noise	Independent Compensation Danel (ICD)	
Each member has a specialism (eg medical, noise, dust, vibration, property etc). Anyone who believes they may be affected by the Tideway works may make an application to the ICP for additional mitigation. Additional mitigation may range form items such as secondary galzing, daily respite, periods of temporary rehousing during specific construction activities or even rehousing throughout the Tideway works. One of the functions of the ICP is to supervise the implementation of various policies (eg NSOMCP – see below) and determine any dispute should one arise. Independent Complaints Commissioner (ICC) Where parties are not satisfied with the response from the ICP they can take any disputes to the ICC to review the decision made Non-statutory Off-site Mitigation and Compensation Policy (NSOMCP): The Non-statutory Off-site Mitigation and Compensation which area available to those living or working near Tideway construction sites. It is available on the Tideway website. Off-site mitigation: This is mitigation measures that the project can install at properties around the construction. This will reduce the levels noise or vibration levels where the effects are felt: for example, by installing secondary glazing at a property affected by noise	independent compensation ranei (icr)	· · · · · · · · · · · · · · · · · · ·
dust, vibration, property etc). Anyone who believes they may be affected by the Tideway works may make an application to the ICP for additional mitigation. Additional mitigation may range form items such as secondary galzing, daily respite, periods of temporary rehousing during specific construction activities or even rehousing throughout the Tideway works. One of the functions of the ICP is to supervise the implementation of various policies (eg NSOMCP – see below) and determine any dispute should one arise. I from the project's construction		from the project's construction
	On-site mitigation:	
reduce the noise / dust / vibration at their source (ie		_
on site). These measures include using special		-
construction equipment that creates less noise,		
buildings – such as acoustic enclosures – and water		* *
jets to reduce dust levels etc Specific mitigation		
which is to be used at each constrcution site is		

	contained in the Code Of Construction Practise (CoCP).
Perimeter hoarding:	These are the screens / barriers surrounding the site works. They have two purposes, to reduce noise as a type of acoustic screening and to act as a safety/security measure to help prevent unauthorised access to the site.
Portals	openings at the bottom of the shaft walls through which the tunnelling machines will pass
Section 61 consent:	Before any construction work can take place, the project requires written consent from the local authority. This consent can be given using Section 61 of the Control of Pollution Act (19 74). The consent relates to construction activities meeting certain criteria regarding noise control, such as ensuring noise is kept at acceptable levels through 'best practicable means', or strategies are put in place to mitigate the effects of noise.
Shaft	This is the circular excavation which, once completed, will enable the lowering of the Tunnel Boring Machine and the tunnel to be constructed.
Slurry Treatment Plant (STP)	The excavated material removed during tunnelling will be a chalk slurry with a high water content. The slurry treatment plant will remove the water, so that the chalk can be transported away from site by barge.
Trigger Action Plan (TAP):	A number of properties affected by the project's construction have a Trigger Action Plan created for them. These plans set out potential mitigation that could be provided to the property, or its occupants, to reduce the impact of the construction.
Tunnel Boring Machine (TBM)	This is the machine which will excavate and construct the tunnel.
